

Bottom Seal Types:

Star Seal—Designed without gussets, this is the most common type of seal. The star seal eliminates gaps along the seal, allowing the bag to conform more easily to the shape of the waste container. Star seal liners more evenly distribute weight inside the bag, maximize carrying capacity and help eliminate leaks.

Gusset Seal—Designed with both sides tucked in to form gussets, this seal is found on flat-style bags. Gusset seal liners are sealed through four layers of film where indented and just two layers of film in the middle, creating a potentially weak bottom seal.

Flat Seal—Designed with a bottom seal to create a two-dimensional bag, much like a pillowcase. Flat seals are strong along the bottom, but may leak from the corners. Liners with a flat seal do not conform as well to the shape of most containers.

A. Commercial Can Liners

- ISO registered facilities ensure superior quality and consistency
- Made from Formosa resins for reliability and consistency
- Star-sealed bottom design distributes weight evenly—creates a seal up to eight times stronger than the film itself
- Innovative “clamshell” box with E-Z identification code number system to eliminate confusion
